The Big Green Machine is an open-access site analyzing investments, jobs, and geography of the North American clean energy supply chain (United States, Canada, and Mexico), ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

Existing and under-development utility-scale solar, wind and battery energy storage projects are expected to generate a boom of economic benefits for the state of Texas.

The Big Beau project, located in California, comprises a 128-megawatt (MWac) photovoltaic (PV) solar plant and a 40 MW/160 MWh battery energy storage system. It is one of eight ...

With the new projects online, renewables (including wind, solar, geothermal and hydropower) and battery storage now make up 30% of the country's large-scale power generating ...

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the ...

Spending on low-emissions power generation has almost doubled over the past five years, led by solar PV. Investment in solar, both utility-scale and rooftop, is expected to reach USD 450 billion in 2025, ...

Wind and solar investments in the first half of 2025 fell 18%, to nearly US\$35 billion (prior to the enactment of this act), compared to the same period in 2024. 1 Still, renewables dominated US ...
