Few studies have optimized global deployment of photovoltaic and wind power. Here we present a strategy involving construction of 22,821 photovoltaic, onshore-wind, and offshore-wind...

In our latest Short-Term Energy Outlook, we forecast that wind and solar energy will lead growth in U.S. power generation for the next two years. As a result of new solar projects coming on ...

All relevant organizations are requested to adhere to the above mentioned requirements, and actively promote the construction of wind and PV grid-parity and below-grid-parity projects.

Last year, the U.S. saw additions of about 45 GW of solar and wind combined. This increase from 2023 shows robust progress, but we still need more growth in carbon free generation ...

Accelerate the construction of supporting grid connection projects for wind power and photovoltaic power generation projects, and fully connect with the construction of new energy power generation projects ...

As climate change cranks up the heat (literally), the global push to promote wind and photovoltaic power generation has become the energy equivalent of switching from flip phones to smartphones.

Actions to expand generation and consumption of solar and wind energy are seen in three distinct arenas: (1) incentivizing renewable energy production and use, (2) increasing the use of ...

Under the goal of "Carbon Emission Peak and Carbon Neutralization", the integrated development between various industries and renewable energy (photovoltaic, wind power) is of great ...
