Explore how Battery Energy Storage Systems (BESS) and Bidirectional Charging (BDC) are transforming energy storage, improving efficiency, and maximizing renewable energy.

The system, managed by Hybrid Greentech, uses smart control to optimize energy storage and distribution.

On-site renewable power coupled with storage can offset, augment or outright replace utility power for a limited length of time. Innovative airports such as Pittsburgh International Airport ...

VEHICLE V2G needs "Bi-Directional" Power Flow. Ability to change direction of power transfer quickly. High efficiency >97% (End to End) at power levels up to 22KW.

encing power protection equipment is crucial for maintaining a stable and safe electrical supply. Airports need robust systems to protect against power surges, electrical faults, and other potential disruptions. ...

Frigate manufactures eVTOL Power Distribution Cabinets in configurations supporting various power levels matched to aircraft charging requirements. Remote monitoring integration enables operators to ...

Often combined with solar or wind power Bidirectional AC-DC converter and bidirectional DC-DC converter to control energy flow

Our innovative charging solutions that power the infrastructure along with planning and implementing secure grid connections are shaping the future of airport transportation and travel and enabling rapid ...
