When solar projects reach the end of their expected performance period, there are several management options. They include extending the performance period through reuse, refurbishment, or repowering ...

Explore the critical steps in decommissioning power plants, from shutdown to safe dismantling, ensuring compliance and environmental care.

Closing a power generation facility is a complex process. Such projects are sensitive and not without risk. We leverage our experience and best practice and apply those in distinctive ways to develop ...

O'ROURKE provides decommissioning and site services for projects of all sizes. We can engineer and implement turnkey power plant decommissioning services as a single-source solution, handling ...

This publication provides guidance on a typical project process to safely and economically prepare a power station for decommissioning and for its handover in a safe state for demolition.

This piece gets into everything needed to create a working solar plant decommissioning strategy. Facility owners and operators will find a detailed framework they can use to plan and carry ...

In general, solar projects receive an approval for construction, and operate between thirty and forty years. Upon completion of the economic life of a project or, potentially permit expiration, the project ...

This document, which was developed by NDA in association with OSHA, is aimed at providing helpful guidance for owners, general contractors, subcontractors and others who may be involved in power ...
