But here's the kicker: photovoltaic panels blocking each other isn't just about hurt silicon feelings - it's a \$4.6 billion annual problem for the solar industry according to NREL's latest data.

Around 13,000 photovoltaic (PV) solar panels are fitted in the UK every month - most of them on the roofs of private houses. In many cases, solar units become relatively uneconomical before...

A nationwide analysis by USA TODAY shows local governments are banning green energy faster than they're building it. At least 15% of counties in the U.S. have effectively halted new ...

Among the many challenges to reach high levels of solar deployment, one challenge is misinformation that delays, obstructs, and sometimes cancels solar projects. Across the country we are seeing ...

Eighteen states have more than half their planned generation capacity at risk of being blocked, with Texas, Virginia, Arizona, and Nevada among those expected to see the most disruption.

You've probably wondered: "Will my solar panels really lose power if a tree branch shadows just one cell?" Well, the short answer is yes - but the full explanation might surprise you.

Eighteen states have over 50% of their planned electricity capacity at risk of being blocked. Many of these states, including Texas, Virginia, Arizona, and Nevada, are expected to lead ...

The phenomenon of solar energy being obstructed primarily pertains to external factors that inhibit the direct sun exposure required for solar panels to function at optimum levels.
