This Review discusses the application and development of grid-scale battery energy-storage technologies.

Overview Construction Safety Operating characteristics Market development and deployment A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of energy storage technology that uses a group of batteries in the grid to store electrical energy. Battery storage is the fastest responding dispatchable source of power on electric grids, and it is used to stabilise those grids, as battery storage can transition from standby to full power in u...
