Should I use a 90W or 65W Charger?

It's generally advisable to use the charger that matches the wattage and specifications recommended for your laptop. In your case, using a 90W charger instead of the original 65W charger should not cause any issues and may provide more efficient charging. Sometimes, calibrating the battery can help resolve erratic charging behavior.

How much power does an inverter use?

An inverter uses a small amount of energy during the conversion process. The difference between the input power and the output power is expressed in percentages. The efficiency of modern inverters is more than 92 %. This means that a maximum of 8 % of the power consumption is used to convert battery voltage to 230V/50Hz.

Is a higher wattage inverter safe?

Yes, using an inverter with a higher wattage rating than required is typically safe and can be advantageous. It allows for the addition of more appliances in the future and ensures that the inverter is not running at its maximum capacity constantly, which can be beneficial for the longevity of the inverter.
