The CPUC decision sets in motion the state's process for developing these resources, allowing the Department of Water Resources (DWR), in its new role as the state's central procurement entity, to ...

The decision identifies four types of LLT resources that DWR may procure through centralized solicitations: offshore wind, geothermal, multi-day long-duration energy storage, and long ...

By scaling these resources, the state aims to lower their costs, enhance diversity of resources, and integrate them more effectively into the electric grid.

This chapter supports procurement of energy storage systems (ESS) and services, primarily through the development of procurement documents such as Requests for Proposal (RFPs), Power Purchase ...

When a supplier installs and commissions a battery system, the supplier will typically need to meet specified performance requirements (e.g., achieving minimum levels of availability, capacity, ...

California will solicit up to 2 GW of long-duration energy storage resources as part of a 10.6-GW centralized procurement for emerging clean energy technologies to be deployed between ...

The California Public Utilities Commission (CPUC) today (Aug 26) established an innovative centralized procurement strategy aimed at boosting the state's clean energy resources.

The California Public Utilities Commission (CPUC) has authorised a new centralised strategy for procuring long-lead-time resources, including long-duration energy storage (LDES).
