-----

In 2025, Chile installed 1.13 GW of new solar capacity, reaching a cumulative total of 11.63 GW. Solar energy accounted for over 31% of the country's electricity generation.

Government officials have said they expect solar power will account for 46% of the country's total installed generation capacity by 2060, with most of that solar located in the north of...

The first two phases of Oasis de Atacama, the largest solar power and energy storage project in Latin America, have come on stream in Chile's Antofagasta Region.

Due to its high solar potential, solar power developments will likely grow most in the north. Solar generation is expected to contribute 46% of Chile's electricity in 2060.

The rapid growth in renewables in Chile has been provided by solar and wind, which currently account for 21% and 12% of generation, respectively. Their share has more than doubled ...

Chile is developing two types of solar technology: solar photovoltaic (PV) panels and solar thermal energy. There are 44 solar PV projects under evaluation, 86 in the approval process, 318 ...

Specifically, hydropower and solar energy have been significant contributors, making up close to 28% and 24% of total electricity generation, respectively. Wind is also playing a crucial role, contributing ...

Chile has reached fresh milestones in its energy transition amid a rapid build-out of solar and battery storage infrastructure. The context: The South American nation's brisk shift to clean ...
