China produces 74% of the world's lithium-ion batteries and continues to expand battery plant operations despite its heavy reliance on raw battery metals from Africa.

African lithium reserves are critical to meeting future demand requirements. Driven by capacity additions in Zimbabwe, Mali and Nigeria, African lithium production is forecast to grow at a ...

With the global demand for EVs surging, China is seeking to lock in supplies of lithium, a metal essential for battery production, and African nations have become key players in this supply ...

Chinese miners and refiners are significantly increasing lithium output in Africa, responding to the growing demand for this critical battery metal despite concerns about potential ...

Chinese miners and refiners are driving a surge in African lithium output, shrugging off concerns over a glut to lock in future supplies of the critical battery metal.

Faced with China's dominance of the lithium supply chain, western officials are pitching their investment offer to African countries as a more socially responsible alternative.

With the global shift to electric vehicles (EVs) accelerating, China is cementing its dominance over the lithium supply chain by pouring investment into African mines, creating a new center...

The ongoing dispute in Namibia may set the precedence for other lithium-producing African countries to better negotiate with China. The course of the global energy transition may be determined by the ...
