Japan and Europe, which used to be world leaders in solar, saw some companies either go bankrupt or move their manufacturing to China.

Calls for Japan to prioritize renewable energy sources like wind and solar are increasing as the government reviews its energy plans. However, China's dominance of key components and ...

Declining module prices support deployment across all segments, making rooftop projects comparable to ground-mounted ones. Long-term cost reductions will further integrate solar ...

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

Japan is betting \$1.5bn on a breakthrough in next-generation ultra-thin, light and bendy solar panels, subsidising the commercialisation of a technology that analysts say could disrupt...

China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions.

Solar has been the fastest-growing power source in terms of electricity generated for 20 consecutive years, while its installed capacity has doubled in just three years, rising from 1 TW to 2 TW.

Japan was once the world's leader in solar panel manufacturing, but its share has fallen to below 1% because of the subsidized competition from Chinese manufacturers. However, Japan can claim that ...
