What does a circuit breaker do in a substation?

Circuit breakers perform two fundamental roles in substations: (1) interrupt high fault currents safely to protect equipment and limit system disturbance, and (2) provide a means of making and routing power during normal operation (switching, sectionalizing).

What are Mitsubishi Electric GIS & GCB circuit breakers?

Mitsubishi Electric gas-insulated switchgear (GIS) and gas circuit breakers (GCB) represent the best of modern technologies. Since commercializing Japan's first GCB in 1968, we have supplied a variety of circuit breakers and GIS rated from 72~1100kV.
