-----

-- The U.S. Department of Energy (DOE) today released three annual reports showing that wind power continues to be one of the fastest growing and lowest cost sources of electricity in ...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

As of end of 2024, the total wind power capacity installed across the United States stood at over 154 gigawatts. Overall, wind energy has become the largest renewable electricity source in...

Current installed wind generation capacity in the U.S. is roughly 152 gigawatts (GW), according to the U.S. Energy Information Administration (EIA). That capacity is up 46% from 2019, ...

(Reuters) - Wind farms have generated a record share of U.S. electricity production so far in 2024, and are the second largest source of clean power behind nuclear plants in the U.S. ...

In 2024, global wind capacity additions reached around 125 GW, and this momentum is expected to continue into 2025. The GWEC Global Wind Report 2025 reviews the industry's 2024 performance ...

"The surge in first quarter wind installations, combined with a strong development pipeline, underscores the wind industry's resilience and its capacity to rapidly deliver the clean, affordable, ...

Last year's growth - 109 GW of new onshore wind and 8 GW of offshore wind - brings global cumulative capacity of wind energy to 1,136GW, spread across all continents, with 55 ...
