This chapter describes state experience in using interconnection standards and net metering policies to facilitate or encourage the adoption of DERs, such as rooftop solar photovoltaic (PV), energy ...

o Protocol 10.2.3.1(1) (C): Each TSP and DSP shall install, control, and maintain the meters, recorders, instrument transformers, wiring, communications, and other miscellaneous ...

However, connecting a solar or energy storage system to the electrical grid involves navigating a series of administrative and technical steps. This blueprint simplifies the process, ...

Purpose This document provides guidance for the interconnection of electric storage to operate in parallel with the utility and a customer's renewable generation. The energy storage is connected on ...

Meter Set: The installation of the net meter and energy storage metering by NV Energy. This occurs after submission of complete supporting documentation, satisfactory net metering verification, and ...

This section provides the engineering requirements that the Customer-Generator must comply with to install a Net Metering system or Energy Storage Device paired with a Net Metering system:

When an advanced energy or water meter is installed on a building and the data from that advanced meter is used to identify energy or water conservation measures, the life-cycle cost savings resulting ...

For NEM-Small paired storage systems, no additional metering on either the NEM REGF or the storage device is required. Instead, an estimation methodology will be used in lieu of metering to validate the ...
