---

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

At a panel on grids, speakers discussed alternative technological options to alleviate grid connection issues - including the addition of more storage capacity - and greater awareness of the...

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched on Wednesday by LCP ...

Europe needs to more than double its current energy storage capacity by 2030 to meet its energy transition targets.

It offers near real-time data on the deployment of storage facilities across Europe, including an interactive dashboard and map, and identifies all the technologies, from battery storage ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy expansion. The report underscores ...

This event will bring together key stakeholders from across the region to explore the latest trends in energy storage, with a focus on the increasing integration of energy storage into ...

Through in-depth interviews with industry experts, this series examines how energy storage is accelerating the shift to clean energy, strengthening grid stability amid increasing ...
