Are EVs the future of road transport?

Two/three-wheelers - an important mode of road transport in the region - electrify faster: by 2030, almost 1 in 3 such vehicles sold are electric. Across all vehicle modes, the deployment of EVs replaces the use of more than 5 million barrels of oil per day globally in 2030, an important energy security consideration.

Which country produces the most EVs in the world?

China continues to be the world's EV manufacturing hub and is responsible for more than 70% of global production. Car manufacturers headquartered in China predominantly cater to the domestic market, accounting for around 80% of domestic sales in 2024 and almost all of the 25% growth in global EV production.

How did China influence electric car sales in emerging markets?

Policy support and relatively affordable electric car imports from China played a central role in increasing sales in some emerging electric vehicle (EV) markets, accounting for 85% of electric car sales in both Brazil and Thailand, for example.

Which country imports the most electric cars in 2024?

The United States remained a net importer of electric cars; imports increased by nearly 40% in 2024, while exports fell by nearly 15%. Chinese EV export markets are diversifying as Chinese automakers make headway in Brazil, Mexico and Southeast Asia.

Somalia is gearing up for a transformative change in transportation with the growing shift to electric vehicles (EVs). This move isn't just about embracing modern technology - it's a chance to ...

Introduction
