How can energy storage be regulated in South Africa?

Identification of priority energy storage use cases and applications for the South African context to inform development of the corresponding regulatory framework. Amendment of the grid code to be technology agnostic and review the complete set of codes for optimal integration of ESS at all levels.

Does South Africa's policy environment recognise energy storage?

The literature review and case studies revealed that a policy environment that recognises and signals the strategic value of energy storage can direct and enable development and investment in the sector. South Africa's policy environment, represented by the IRP 2019, recognises ESS but only as a generation asset.

Is South Africa ready for energy storage?

The extent to which the South African market is ready for energy storage is considered in subsequent sections. The 2030 vision outlined in the National Development Plan (NDP) of 2011 set the objective to completely eliminate income poverty and reduce inequality in the country.

Is energy storage a viable option for South Africa's power system?

In the longer term, however, at higher levels of variable generation, flexibility requirements will significantly increase demanding interventions to ensure secure and cost-efficient operation of the South African power system. Energy storage was specifically noted to be highly suitable for this purpose.

(SAREM) An inclusive industrial development plan for the renewable energy and storage value chains by 2030 2 April 2025 The Department of Trade, Industry and Competition (the dtic), November 2020 ...

The National Energy Regulator of South Africa (NERSA) is a regulatory authority established as a juristic person in terms of Section 3 of the National Energy Regulator Act, 2004 (Act ...

However, the prevailing policy and regulatory ecosystem lacks sufficient clarity, incentives, and standardization to support widespread deployment. This paper presents a ...

How should the South African government enable the development and growth of a utility-scale stationary energy storage market in the country, given its available policy levers and best practices ...

In the "Guidance on New Energy Storage", energy storage on the power side emphasizes the layout of system-friendly new energy power station projects, the planning and construction of large-scale ...

Africa is aiming to procure utility-scale battery storage with two tender programmes: its Battery Storage IPP Procurement Programme as well as hybrid battery storage and variable ...

In South Africa, battery storage is increasingly seen as a key pillar to help provide grid stability and integrate variable renewables given its ageing coal-fired power fleet and grid.

utdawns known as load-shedding. Increasing the share of renewables in South Africa's electricity grid and commensurate use of Battery Energy Storage Systems (BESS) will be an essential part of ...
