An American firm with a European division, Flower Turbines, is making strides in changing the way we harness wind energy through its tulip-shaped, small wind turbines. These ...

Unlike conventional wind turbines that require at least 3 m/s wind speed to start spinning, the tulip shaped wind turbine begins rotating at just 1 m/s. As a result, it can generate clean energy ...

Developed by Flower Turbines, wind tulips are small-scale wind turbines designed to revolutionize the renewable energy market. These vertical turbines are quiet, aerodynamic, durable, ...

Flower Turbines provides an ideal solution for urban wind energy generation, where traditional wind towers and large turbine systems are often impractical. Their patented, petal-shaped ...

In this study, a vertical axis wind turbine with a shape resembling an innovative rose flower-like is developed, additively manufactured, and numerically evaluated and compared with the ...

Our vertical axis wind turbines are the perfect solution to your energy needs. Combining beauty with function, our sustainable energy solutions deliver whisper-quiet power without sacrificing aesthetics ...

Flower turbines are created with the safety of birds in mind as the blades are curved inwards in a long vertical vessel, rather than branched like propellers. Wind electricity generation has ...

In 2012, two wind turbine blade innovations made wind power a higher performing, more cost-effective, and reliable source of electricity: a blade that can twist while it bends and blade airfoils (the cross ...
