Agrivoltaics refer to growing crops, building pollinator habitats or raising livestock underneath solar panels. It allows for renewable energy systems and agriculture to occur on the same piece of land.

Western professor Joshua Pearce collaborated with professional shepherd Rafael Lara on a study that shows the profitability of "solar" sheep, raised specifically to trim grass and weeds under ...

Livestock are a very effective vegetative management tool for community and utility solar energy systems. Cattle are grazed in some solar projects, but typically it is sheep that are used to ...

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

Agrivoltaics benefits both sheep farmers and solar energy companies. The former typically experiences higher productivity and yields, along with lower energy bills, and the latter ...

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. This dual-use approach not only supports clean ...

“Agrivoltaic sheep are a simple and easy solution for the co-existence of agriculture and solar energy on Canadian farms. The sheep like the shade, plus the solar panels increase grass yield and protect ...

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.
