Utility-scale solar power capacity in China reached more than 880 gigawatts (GW) in 2024, according to China's National Energy Administration. China has more utility-scale solar than ...

Chinese renewable generation reached 366 terawatt-hours (TWh), making wind and solar the country's largest sources of new power. This transformation has also driven the rise of new ...

The electricity council's estimates put total coal capacity at about 1,333 gigawatts by the end of 2026, while solar ended 2025 at 1,200 gigawatts and has averaged 270 gigawatts of growth a ...

The government incentives have also contributed to the curtailment of solar energy, as many of the solar projects have been built in northern and western regions of China where there is a low demand for ...

China's solar power sector saw steady expansion in 2025, contributing significantly to the growth of the nation's overall power generation capacity, according to data released Wednesday by ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

In the first quarter of this year, electricity generated from wind and photovoltaics reached 536.4 billion kilowatt-hours, accounting for 22.5 percent of China's total power use, up 4.3 ...

In 2024, China generated 4% of its total electricity from nuclear power, reaching 444TWh, a 2.2% y-o-y increase. December alone saw China generate 42TWh of electricity from nuclear power, +11.4 % y-o-y.
