Two years later, the panels have never been switched on and the company that installed them--Titan Solar--has abruptly gone out of business, leaving Palmer with a shiny but useless array ...

There's also the major push for a ban on monocrystalline silicon solar panels, which as far as I can tell are only manufactured in China at any scale. It wasn't easy to find that information either, for some ...

A multibillion-dollar solar plant is set to close down next year because it's supposedly not "serving its purpose", which has left everyone saying the same thing.

In the end, what stopped me from buying more solar panels was the discovery that the cheapest and cleanest kilowatt-hour is still the one you never use in the first place.

With the solar rooftop tax credits set to expire in December, there has been a scramble to install, and some solar installers say they are having to turn away customers.

In many major markets, like California, bill credit rates for sending excess electricity to the grid have been slashed by 75% or more. Tariffs have posed challenges to the industry as well.

Ivanpah, the concentrated solar power facility in the Mojave Desert, is shutting down in early 2026.

Is now a bad time to buy solar panels? It might be a bit of a slow period for the solar industry, but that doesn't mean you should delay a solar installation on your own home.
