Imagine a city where wind turbines and solar panels power 80% of homes even when the sun isn't shining or the wind isn't blowing. That's exactly what Helsinki's new energy storage initiative aims to ...

The aim of this study is to assess the potential of large-scale utilization of solar panels on the roofs of Helsinki, Finland. First, a literature review is conducted on the topics of solar power and spatial ...

Read about solar power production, its costs and environmental effects and the project development of the solar power plant. Renewables Finland currently maintains three up-to-date lists and statistics ...

Helsinki metropolitan area published an open data portal showing the solar potential of the area's building on an interactive 3D map. The data contains the photovoltaic production potential calculated ...

Unlike traditional district heating systems, Hot Heart leverages a combination of renewable energy and innovative thermal storage to overcome the intermittency challenges of wind and solar ...

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated ...

Take the Kalasatama Smart District project. They've achieved 83% energy self-sufficiency through hybrid systems storing solar energy as both electricity and heat. During January's polar vortex, these ...

In 2025, Helsinki redefined urban transit hubs with 16 kW solar systems, turning 50 bus stops into self-sufficient sanctuaries complete with solar-heated seating, real-time displays, and USB charging.
