How do I choose a portable power station?

A portable power station's maximum output tells you the total watts it can produce, which determines what you can and can't power with it. Look for a power station that can handle the combined wattage of the electronics you plan to plug into it.

Does a power station have a fan?

Internal fans will kick on to keep the power station from overheating. While these fans are far quieter than the roar of a gas-powered generator, they do still create some noise. Smaller power stations are about as loud as a small fan, while larger ones produce about the same amount of noise as a refrigerator.

Does a power station have ingress protection?

Some power stations have ingress protection (IP) ratings, indicating they have been tested for water and dust resistance. The Bluetti Elite 200, for example, has an IP65 rating, which means it can withstand water sprays from all angles.
