---

Solar PV investments accounted for 45% of total global electricity generation investment in 2022, with over \$320 billion invested. 1.5 billion solar panels were made worldwide in 2022, a 57% ...

Solar energy users save around 35 tons of CO2 emissions and 75 million barrels of oil each year. Utility-scale PV power plants made up 70% of global solar electricity generation in 2022.

We've looked at the 15 biggest solar farms in the world right now, examining capacity, total investment, and the future of solar power worldwide.

Between now and 2030, the world is on course to add more than 5 500 gigawatts of renewable power capacity - roughly equal the current power capacity of China, the European Union, ...

Data and information about power plants and their location across the globe, plotted on an Interactive world map

In this article, with the help of charts and key statistical data, we reveal the latest solar power statistics that demonstrate how the industry has grown so far, and the outlook and potential for ...

In 2019, approximately 2% of the world's energy was generated by solar power, but that portion is increasing exponentially each year. This global solar energy movement is supported by the ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.
