The push rod may be used to drive mechanical equipment, water pumps, air conditioning systems, and the like. The photovoltaic push rod is an environment-friendly and renewable energy...

The push rod is used as a driving device and is more and more widely applied to the field of photovoltaic tracking supports; because the installation of push rod has the convenience,...

The photovoltaic generating set has a simple structure; the transmission mechanism is controlled at low power consumption; the hour angle tracking range is larger than or equal to ± 50 degrees;...

Therefore, the utility model provides a support is trailed to many push rods drive photovoltaic to solve the relatively poor problem of photovoltaic tracking support stability among the...

The push rod of the existing adjustable photovoltaic bracket is generally composed of an inner tube, an outer tube, a screw rod, a trapezoidal nut, a gear box, a transmission shaft, a bevel...

By means of the above mode, the electric push rod provided with the built-in microswitches and the encoder and used for driving the photovoltaic solar bracket can realize ...

The present invention relates to a kind of photovoltaic brackets, and in particular to push-and-pull rod-type tilt adjustable section photovoltaic bracket belongs to photovoltaic branch...

In addition, the photovoltaic fixed and adjustable bracket also has the function of protecting photovoltaic modules, which can firmly support the photovoltaic modules and prevent them from being damaged ...
