This paper proposes a self-adaptive energy management strategy based on deep reinforcement learning (DRL) to integrate renewable energy sources into a system comprising ...

In this work, a hybrid cogeneration energy system that integrates ...

Hybrid storage systems, which combine liquid and compressed gas technologies, represent a promising avenue for addressing this need. By integrating the strengths of both liquid ...

This review paper covers the technological advancements, design criteria, retrofitting enhancement strategies, and renewable energies" emerging application potentials for improving the ...

Savannah River National Laboratory (SRNL) has developed a system and method using a hybrid compressed air/water energy storage system. This system can be used in a subsurface land-based ...

Disclosed embodiments are directed to a Compressed Air Energy Storage (CAES) system, and, more particularly, to a hybrid CAES system incorporating aspects of a diabatic CAES system...

The hybrid thermal and compressed air energy storage (HT-CAES) system, presented in this paper, addresses the drawbacks of conventional and AA-CAES systems. Contrary to D-CAES and similar to ...

Incorporating energy storage systems into energy and power applications is a promising approach to provide economic, technical, and environmental benefits to these energy systems.
