Scientists are revisiting the ancient Baghdad battery, a 2,000-year-old artifact that might have been used as a primitive energy source, but new studies also suggest it could have been a part of ...

As Iraq's renewable capacity grows, the testing gap becomes increasingly critical. Recent black start capability tests in Mosul demonstrated that properly validated storage systems ...

There are a number of pathways available for the future of electricity supply in Iraq but the most affordable, reliable and sustainable path requires cutting network losses by half at least, ...

You can't talk about Iraq energy storage battery shell production without mentioning material science. Let's face it: Iraq's 50°C summers aren't exactly battery-friendly.

Iraq is taking serious steps toward expanding solar power with efficient battery storage systems. The global decline in battery prices, coupled with foreign investment and government ...

Science A 2,000-year-old battery? An ancient clay pot found in Iraq has archaeologists puzzled about what it was used for A new study has delved into the debate about the use of an ...

Did you know Iraq faces 5GW power deficits during peak demand? With temperatures regularly hitting 50°C, the country's aging grid struggles to meet basic needs.

Think of Iraq's battery storage potential like a camel storing water - it's all about surviving the dry spells (or in this case, power outages).
