The government is studying a renewable portfolio standard that could promote this energy source. While wind and solar investment remains attractive in Vietnam, existing capacity is under-utilized due to ...

Vietnam's Eighth National Power Development Plan (PDP 8), released in 2023, emphasizes the expansion of rooftop solar, particularly in off-grid areas and for self-consumption ...

OverviewHydropowerWind energySolar energyBiomass energySolid waste energy (waste-to-energy)Geothermal energyTidal energy Vietnam utilizes four main sources of renewable energy: hydroelectricity, wind power, solar power and biomass. At the end of 2018, hydropower was the largest source of renewable energy, contributing about 40% to the total national electricity capacity. In 2020, wind and solar had a combined share of 10% of the country's electrical generation, already meeting the government's 2030 goal, suggesting future displacement of growth of coal capacity. By the end of 2020, the total installed capacity of solar and wind power ...

By leveraging its natural advantages and ongoing development efforts, Vietnam is poised to become a leading force in both solar and wind power generation within Southeast Asia.

As countries worldwide race to increase their use of renewable energy, Vietnam's recent progress will likely have a ripple effect across the ASEAN member states.

Vietnam is revising its energy plans to focus more on large solar farms and less on reliance on coal and natural gas. The fast-growing economy now aims to get 16% of its energy from ...

Vietnam's solar power industry has grown rapidly since 2017, driven by generous feed-in tariffs and strong government support. The country now has one of the highest installed solar ...

With fossil fuel resources dwindling and energy consumption projected to rise by approximately 10% annually through 2030, one of the fastest rates in Asia, solar power is essential for Vietnam's ...
