Quality Guarantee Natural symmetrical bifacial structure bringing more energy yield from the backside. Stronger water resistance, greater air impermeability to extent module lifespan.

N-type solar cells have a slightly different construction compared to traditional p-type solar cells. The main difference lies in the doping of the semiconductor material used in the cell.

N-Type HJT Bifacial Half Cell Double-glass Solar Module 23.66% Max. Module Efficiency

Bifacial glass-glass module shows an excellent anti-PID and LID-free performance. Power output gains of bifacial module with n-type PERT solar cell are almost 7.6% on grass, 15% on sand ...

Double-glass modules, with their performance in the face of salt mist, high temperatures and high humidity, have won the market's favour. However, this trend is not without its risks.

Trina Solar, the world leading global PV and smart energy total solution provider, recently announced that it has begun mass production of N-type i-TOPCon...

Dual glass is the preferred structure for the rear side cover of the N-type modules because the glass-glass version can maximize the advantages of the N-type.

Higher power, bifaciality, efficient production under extreme conditions, combined with the lower degradation, no LID and LeTID effects and a glass-glass structure of Jinkosolar's N-type Tiger Neo ...
