---

With its updated energy storage policy, Japan aims to achieve 45% renewable electricity by 2030 while solving the ultimate puzzle: how to store sunshine and wind like canned tuna.

Japan's energy storage policy is anchored by the Ministry of Economy, Trade and Industry (METI), which outlined its ambitions in the 6th Strategic Energy Plan, adopted in 2021. The ...

nai told Energy-Storage.news. Japan's 6th Strategic Energy Plan (released in 2021) and the GX (Green Transformation) Decarbonization Power Supply Bill (released in 2023) target increasing the share of ...

Despite decreasing energy consumption across business, household, and transportation sectors, Japan is seeing major investments in battery storage systems to support its growing ...

Japan's drivers have been wary of making the switch to electric vehicles. Its EV market share is about a 10th of China's, and EVs account for less than 1 per cent of all cars in use.

Japan, which relies on imported fossil fuels for around 70% of its electricity, has been expanding renewables to improve energy security, but has faced frequent power curtailments on its...

As Japan charges toward its storage targets (pun absolutely intended), one thing's clear - their energy storage ratio isn't just about numbers. It's a high-stakes innovation race where the finish line keeps ...

Promoting the popularization of domestic renewable energy and raising the technology self-sufficiency ratio will contribute to the strengthening of Japan's industrial competitiveness, not to ...
