Pumping machine is a kind of machine equipment for oil exploitation, commonly known as "kowtow machine", which makes oil out of the well by means of pressure.

The study provides a study on energy storage technologies for photovoltaic and wind systems in response to the growing demand for low-carbon transportation. Energy storage systems (ESSs) ...

A first temperature control switch and a second temperature control switch are set inside to precisely control heating, thereby enhancing the efficiency of the battery as a whole and reducing its...

The minimum daily power consumption is 126.72KWh, the power saving rate is 10.96%, and the unit consumption of liquid production is reduced by more than 0.4, which meets the requirements of oil ...

Product Description ** Energy storage system for solar power (ESS) refers to the device of converting electrical energy from power systems into a form that can be stored for converting ...

By using the D71 frequency converter, the motion law of the pumping unit can be adapted to the changing working conditions of the oil well, so as to improve the system efficiency and achieve the ...

As far as the eye can see, the endless "Kowtow machines" that keep Karamay alive are at work. In the 10,000-mile oil fields of the Gobi Desert, the clatter of metal is heard, and liquid gold ...

This study optimizes the tilt angle of photovoltaic (PV) panels on a large oil tanker ship system and considers the impact of partial shading to improve the performance of the PV system.
