U.S. plans to expand its existing solar capacity by targeting 500 GW of additional solar capacity by 2035. Currently, the U.S. has a solar capacity sufficient to power 40.7 million households.

Chinese scientists have announced a plan to build an enormous, 0.6 mile (1 kilometer) wide solar power station in space that will beam continuous energy back to Earth via microwaves.

FirmoGraphs is tracking more than 100 very large solar projects starting construction in 2023 with a total estimated value of nearly \$40 billion.

According to the U.S. Energy Information Administration (EIA), the country is set to add a record 63 GW of new power plant capacity in 2025--93% of which will come from carbon-free sources.

EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in 2025 (39 GWac) and remain at similar levels in 2026 (36 GWac). In 2024, 24 states and territories ...

Here is a list of the largest planned solar projects in development in the US --ranked by planned capacity in megawatts. These projects are expected to come online in the coming years. Scroll down ...

Jan 24 (Reuters) - The U.S. Energy Information Agency expects growth in U.S. power generation over the next two years to be mostly driven by new solar plants, it said on Friday. The EIA said in...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...
