Although there are no subsidies for small-scale solar in New Zealand, the declining costs of photovoltaic have driven strong growth in household installations in recent years.

Going solar demonstrates your commitment to sustainability and will help New Zealand achieve its target of net zero greenhouse gas emissions by 2050. Innovation and new technologies have led to ...

Solar power is now the cheapest form of electricity in most countries, including New Zealand, and its global uptake is growing exponentially. So far, New Zealand's adoption of solar...

The NPS recognises the importance of renewable energy and will help New Zealand achieve the Government's target of 90 per cent of electricity from renewable sources by 2025.

Common sense changes in the energy and building consent systems will drive greater residential solar uptake in New Zealand, Energy Minister Simon Watts and Building and Construction ...

In New Zealand, while there is a growing interest in solar power, misinformation and misconceptions can impede adoption. Policymakers must address these challenges through targeted education ...

Households with solar panels on their roofs will be able to send more power back to the grid - and get faster building consents - under changes announced by the government.

Reduction of Greenhouse Gas Emissions National Policy Statement on Electricity Transmission New Zealand Coastal Policy Statement 2010 National Policy Statement For Freshwater Management 2020 New Zealand Emissions Trading Scheme The New Zealand Emissions Trading Scheme (NZ ETS) is a way of meeting our international obligations around climate change. By putting a price on carbon, the NZ ETS makes renewable electricity more competitive than fossil-fuel generation. The NZ ETS improves the economics for renewable electricity generation projects, while the NPS addresses the res...
