One such breakthrough was recently announced out of a collaboration between a company called SolarCycle and Arizona State University. Together, they were able to successfully ...

SOLARCYCLE and Arizona State University built a solar panel with 50% recycled glass, and it performed just like a new one.

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and China, new facilities are popping up in North America, with ...

A new study has found that solar panels, which are made with 50% recycled glass, perform just as well as new ones.

Customized ITO / FTO conductive glass plays a crucial role in scientific experiments, offering excellent conductivity, transparency, and stability. Ideal for photovoltaics, sensors, and analytical instruments.

This will be the first facility in the world to use recycled solar glass as a core ingredient in new panels. By keeping recycling and manufacturing close together, the company aims to reduce ...

SOLARCYCLE has opened its solar PV recycling factory in Cedartown, Georgia, with a full processing capacity of 5 GW of panels/year The facility is already handling thousands of panels ...

Xilia Group has introduced composite frames for solar modules made from glass fiber-reinforced polyurethane. The company says the frames reduce weight, resist corrosion, and ...
