-----  
Why does Nicaragua produce so much electricity?

This high contribution to emissions from electricity production in comparison with other countries in the region is due to the high share of thermal generation. Currently (November 2007), there are only two registered CDM projects in the electricity sector in Nicaragua, with overall estimated emission reductions of 336,723 tCO<sub>2</sub>e per year.

Does Nicaragua have low-carbon energy sources?

In Nicaragua, the current electricity mix reveals a promising tilt towards low-carbon energy sources. More than half of the nation's electricity, 51%, is derived from low-carbon sources including biofuels, geothermal, hydropower, and wind.

What is Nicaragua's electricity mix?

Nicaragua's electricity mix includes 28% Unspecified Fossil Fuels, 16% Biofuels and 13% Geothermal. Low-carbon generation peaked in 2021.

What projects are being implemented in Nicaragua?

The Inter-American Development Bank (IDB) has several projects under implementation in the electricity sector in Nicaragua: In October 2007, the IDB approved US\$350,500 for the Support to Power Sector Investment Program. In June 2007, a US\$12 million loan was approved for the National Transmission Strengthening for Integration SIEPAC project.

**Summary** This report elaborates Nicaragua's power market structure and provides historical and forecast numbers for capacity, generation, and consumption up to 2030. Detailed analysis of the ...
