In 1839, French physicist Edmond Becquerel observed that certain materials would produce a small electric current when exposed to light. This phenomenon, known as the photovoltaic ...

In 1876, William Grylls Adams and his student Richard Day discovered that when Selenium (Se) was exposed to light, it produced electricity. While it wasn't perfect, it was the first step towards the ...

Since the creation of the first silicon solar cell 70 years ago, solar leaders have been innovating, improving efficiency, lowering costs, and growing this American-born technology into an ...

The construction ran on a combination of solar thermal and solar photovoltaic power. The building didn't use solar panels; instead, solar was integrated into the rooftop.

When were solar panels invented? The development of solar panel technology was an iterative one that took a number of contributions from various scientists. Naturally, there is some ...

Ancient cultures, including Greeks and Romans, harnessed solar energy for heating, lighting, and water heating systems over 2,000 years ago. 18th-century scientists like Horace de ...

In 1839, French physicist Edmond Becquerel observed that certain ...

Solar technology isn't new. Its history spans from the 7th Century B.C. to today. We started out concentrating the sun's heat with glass and mirrors to light fires. Today, we have everything from ...
