How much does a home energy system cost?

The average cost ranges from \$15,000 to \$35,000 for a complete system before incentives, or \$2.50 to \$3.50 per watt installed. After applying the 30% federal tax credit, net costs typically range from \$10,500 to \$24,500. Most homes need 7-12 kW systems to offset their electricity usage.

How much does solar installation cost?

Installation labor accounts for only 5.5-7% of total cost (\$1,375-\$2,500 for average systems), while soft costs represent 40-50% of total investment: Solar costs vary significantly by location due to labor rates, permitting requirements, market competition, and local incentives.

How much does electrical installation cost?

Complex installations can add \$0.50-\$1.50 per watt to base pricing due to additional labor, specialized equipment, and safety requirements. Homes with electrical panels under 200 amps often require upgrades costing \$1,500-\$4,000. This investment ensures safe system operation and may be required by local codes.

Discover the cost of Outdoor Outlet with minimum and maximum price for materials, labor, and supplies.

Answer a few quick questions and our Rate Advisor tool will recommend the plan - or plans - that best match your energy habits, usage and goals. With the right plan, you could save money based on ...
