The global PV market faces uncertainty amid fluctuating module prices and evolving energy policies. Changes to Chinese export taxes may further raise module costs, affecting ...

Solar and battery costs plummet; energy's bright future awaits! The future of energy is rapidly evolving, with significant declines in the costs of solar and battery storage projected for the ...

This paper, which is based on new trade theory with substitutes, examines how antidumping and countervailing policies (ACPs) from the EU and the USA impact Chinese ...

The analysis reveals that three converging factors -- polysilicon consolidation, supply-side production cuts, and the cancellation of China's 13% VAT export rebate -- will drive solar module ...

Over the past three years, household energy storage systems (ESS) have seen explosive growth, driven by rising demand for renewable energy integration. However, recent data suggests a 6.8% quarterly ...

The world's solar manufacturing capacity is set to remain at more than double annual installations in the coming years, with the dynamics of oversupply continuing to depress panel prices, ...

Policy reform in many markets was already in the works: Just as Italy's incentives drove huge numbers of households to install solar, the discontinuation of those incentives was going to ...

The long-term financial sustainability of the solar PV manufacturing sector is critical for rapid and cost-effective clean energy transitions. The net profitability of the solar PV sector for all supply chain ...
