---

Through automation or semi automation, it quickly and accurately separates the photovoltaic panel from the metal frame, improves recycling efficiency, and reduces manual labor intensity.

The photovoltaic panel dismantling machine is a highly automated device that uses high-precision sensors and cutting technology to achieve precise dismantling of the photovoltaic panel frame.

A solar panel frame disassembly machine is specifically designed to dismantle the frames of solar panels, making it easier to recycle the materials after the panels reach the end of their life cycle or ...

The successful removal of junction boxes, frames, and glass from solar panels is vital for maximizing the recovery of valuable materials and minimizing waste.

Low cost: automated dismantling equipment can reduce labor costs and improve production efficiency. With the rapid development of the photovoltaic industry, automated solar PV ...

This economical automatic solar panel disassembly machine is engineered for high-efficiency PV module recycling. By integrating frame separation, junction box removal, significantly enhancing ...

In addition, it has its own conveying device and can directly connect to the next device without a conveyor belt. More importantly, the disassembly speed of fully automatic frame removing equipment ...

We have been striving to establish the structure for proper recycling of solar panels. Through the structure, we will aim at creating a circular society of solar power generation.
