This report provides field procedures for testing PV arrays for ground faults, and for implementing high-resolution ground fault and arc fault detectors in existing and new PV system designs.

PV strand cables, PV generator cables and PV DC main cables have been selected and constructed so that the risk of earth faults and short circuits is reduced to a minimum (DIN VDE 0100-712 para. 522.8.1)

The maximum values originate from two PV module ratings - the open-circuit voltage (Voc) and the short-circuit current (Isc) which are obtained from the module manufacturer.
