-----  
Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

Does a roof-mounted solar PV system have a fire classification?

6.2.6.2 Elevated PV support structures with a PV system installed over a roof assembly shall have a fire classification as outlined in subsection 6.2.2. 6.2.6.3 Roof-mounted solar PV systems shall be designed to include roof access and pathways with spacing in accordance with CFC Section 1205.

What are the UL standards for photovoltaic panels & modules?

6.2.1.1 Photovoltaic panels and modules shall be listed and labeled in accordance with UL 1703 or with both UL 61730-1 and 61730-2. Inverters shall be listed and labeled in accordance with UL 1741.

What documents should be included in a solar roof plan?

At a minimum, these documents must include specific documentation of dead loads, live loads, wind loads, and, where applicable, snow loads for the existing roof design. These plans will provide important information for the solar designer when the homeowner decides to install a system.

These rules do not address the structural sufficiency of the components of the array above the roof. The components above the roof are engineered by the mounting system manufacturers.

Rooftop-mounted photovoltaic panel or module systems and their supports shall be designed and installed to resist the component and cladding loads specified in Table (R301.2 (2)), adjusted ...

It is intended to minimize permitting uncertainty and differing interpretation regarding specific code requirements for solar PV installations.

The first step in choosing a roof-mounted PV anchoring system is to identify the type of roofing material that will be installed and the slope of the roof. These parameters will affect the type of anchoring ...

Structural design requirements for primary framing of buildings or structures supporting solar systems and for anchorage of those systems are discussed in Sections 1 through 4 below of this IR. Solar ...

Builders that intend to meet both the solar PV and solar water heating RERH specifications should detail the location and the square footage of the roof area to accommodate both technologies.

The applicant shall submit a letter to the County stating that the area under the structures supporting the photovoltaic panel or modules is restricted to the public.

Understanding and addressing the fundamentals of solar panel structural requirements can help ensure the safe and effective operation of a solar energy system. Considering factors such as roof material, ...
