A-B-C-D-J-L-M-N-O-P-ohm--The unit of resistance to the flow of an electric current. one-axis tracking--A system capable of rotating about one axis, usually following the sun from East to West. open-circuit voltage(Voc)--The maximum possible voltage across a photovoltaic cell or module; the voltage across the cell in sunlight when no current is flowing. See more on solar-electric List SolarSolar Energy Glossary of Photovoltaic TermsSolar Energy Glossary of Photovoltaic Terms is a comprehensive collection of terms pertaining to solar installations, solar electricity, and solar power generation. The definitions included relate to ...

photovoltaic (PV) array --An interconnected system of PV modules that function as a single electricity-producing unit. The modules are assembled as a discrete structure, with common support or mounting.

Unlock a comprehensive list of 378 Photovoltaic acronyms and abbreviations. Dive into our detailed dataset perfect for professionals and students, updated in December 2022.

Solar Cell: also known as a photovoltaic cell, a solar cell is a device converting sunlight into electrical current. There are either 60 or 75 solar cells in a solar panel.

The photovoltaic glossary from A to Z explains all the important technical terms and abbreviations that are relevant in the field of solar technology.

Start with the big piece: PV panels make DC; the inverter makes AC; batteries store energy; the grid balances the rest. Spot the context: design, safety, policy, or finance. The same ...

PV stands for photovoltaic, the technology that converts sunlight directly into electricity. You'll see PV in solar energy terms like PV module, PV array, and PV system.

Solar-powered trains are usually put in motion by placing photovoltaic panels close to or on rail lines; they can generate enough electricity to trigger a traction current that will be distributed to the grid.
