Portuguese energy firm Galp and Powin, a US-based energy storage integrator, completed the commissioning and injected the first electrons of stored energy to the grid from a utility ...

Portuguese energy giant GALP has announced construction of five battery projects, with a total capacity of 74 megawatts (MW), to store solar energy in Spain and Portugal.

This article explores how energy storage batteries are reshaping power management in Portugal's second-largest city, offering actionable insights for businesses and municipalities.

The company operates as a developer and independent power producer with a diverse technology portfolio that includes solar PV, wind, hydro, and storage projects.

Portugal's electricity network is undergoing a quiet revolution. Investors are shifting from a race to install ever-larger solar fields toward a more nuanced goal: pairing panels and turbines with ...

Explore how Battery Energy Storage Systems (BESS) in Porto are revolutionizing renewable energy integration, grid stability, and industrial efficiency. Discover key trends, data-driven insights, and ...

The batteries will allow Galp to store the solar energy produced in periods of high generation, and to deploy it during periods of high demand, maximizing the energy's value.

StorSystems is driving the Portuguese energy transition by developing, building, and operating advanced battery storage systems. Battery storage allows power produced now to be stored for use ...
