By December 2023, the local government implemented over 20 actions to enhance air quality. These included renewing the public transport fleet with low and zero emissions technologies and ...

With the newly operating 172 e-buses Bogota commissioned in the last few years, 1.5 tons per year of particulate matter emissions and 3,200 tons per year of CO2 emissions will be ...

Today, during New York Climate Week, the city of Bogot&#225; announced its new partnership with the Breathe Cities initiative in a significant move to reduce air pollution, cut carbon emissions, ...

Breathe Bogot&#225; is the city's local strategy with eight targeted actions aligned with the goals of the "Plan Aire" to reduce pollution, improve public health, combat climate change, and meet World Health ...

The city's new alerts advise residents to limit their exposure to pollution by avoiding open spaces during high pollution hours or by reducing their use of private vehicles to help curb emissions.

At the heart of this transformation is the city's Climate Action Plan (CAP), which aims to slash greenhouse gas emissions by 20% by 2030, and achieve carbon neutrality by 2050.

The project reviews the co-benefits of implementing Bogot&#225;'s Air Plan tool for informed decision-making and actions to reduce air pollution from black carbon and other co-pollutant emissions.

This roadmap outlines the plan for the phased implementation of the Bogot&#225; low emission zone, summarising recommendations and best practices for other municipalities.
