Renewable energy sources, also known as clean energy or sustainable energy, harness the power of the sun, wind, water, Earth's heat, and biomass. These sources are constantly ...

Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources.

Tokyo Gas, the country's largest gas distribution utility, announced it would abandon its renewable energy targets entirely, while investing more heavily in liquefied natural gas (LNG) and ...

In the Zero Emission Tokyo Strategy, the Tokyo Metropolitan Government aims to decarbonize 100% of its energy use by 2050 to achieve net zero CO2 emissions by using renewable energy as main ...

It is updated once a year, based on statistical data published by governments and research institutes, and provides basic information on the status of renewable electricity deployment.

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, ...

In this interactive chart, we see the share of primary energy consumption that came from renewable technologies - the combination of hydropower, solar, wind, geothermal, wave, tidal, and modern ...

The term "renewable" encompasses a wide diversity of energy resources with varying economics, technologies, end uses, scales, environmental impacts, availability, and depletability.
