The development of storage, carried out with the support of Enel X and Fraunhofer, will enable ADR to optimise its energy performance, supporting its path towards low-carbon.

Rome's Fiumicino Airport now uses second-life EV batteries to store solar energy and cut 16,000 tons of CO₂ over ten years. Italy's largest second-life battery energy storage system was officially launched ...

Governor Hochul announced awards for 22 large-scale solar and energy storage projects that will deliver enough clean, affordable energy to power over 620,000 New York homes for at least 20 years.

Using Rome Airport as an example, the planned 2nd-life battery storage in combination with a PV system shows the way towards the goal of net-zero emissions in the local power supply. In addition, ...

The PIONEER project involves the design, construction, start-up and operation of a system made up of second-life batteries from the automotive sector for the storage of excess power produced by a ...

A new energy storage facility at Rome's Fiumicino Airport is using second hand car batteries in a bid to reach Net Zero Carbon by 2030. The storage system known as "Pioneer" is the largest in Italy using ...

The beneficiaries will be selected through a competitive, transparent, and non-discriminatory bidding process, where electricity storage developers will compete based on offers relating to the lowest ...

The project will be developed at Rome Fiumicino International airport and the energy stored will cover evening peak-demand, while also providing flexibility services to the grid.
