Quand nous regardons la Lune, elle nous présente toujours la même face. Grâce aux sondes lunaires, on a pu avoir des images de la face cachée de notre satellite naturel. Cette face est beaucoup plus ...

While conventional solar panels on Earth can only produce power during daylight hours and are at the mercy of weather conditions, orbital solar arrays could beam massive amounts of clean...

OverviewHistoryAdvantages and disadvantagesDesignLaunch costsBuilding from spaceSafetyTimelineSpace-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth. Its advantages include a higher collection of energy due to the lack of reflection and absorption by the atmosphere, the possibility of very little night, and a better ability to orient to face the Sun. Space-based solar power systems convert sunlight to some other form of energ...

C'est quoi un satellite ? GRANDES QUESTIONS C'est un objet qui tourne autour d'une planète. Il peut tourner autour de la Terre ... ou d'une autre planète ! La Lune est le seul satellite naturel de notre ...

Le 4 octobre 1957 marquait le lancement du satellite Spoutnik. Cinquante ans après, l'histoire du programme spatial a pris un tournant décisif. 50 ans de l'histoire de la conquête spatiale ...

Space-based solar power works much like solar on Earth - panels convert sunlight into electricity - but with one huge advantage: they're above the atmosphere. This means those panels ...

Now technically and economically viable, space-based solar power (SBSP) could be a new abundant sustainable energy source. Able to provide consistent power renewables struggle to ...

Waste Not Since clouds, atmosphere and nighttime are absent in space, satellite-based solar panels would be able to capture and transmit substantially more energy than terrestrial solar panels.
