How many solar power stations will Sinopec build by 2027?

BEIJING: Chinese refining giant Sinopec plans to build 10,000 solar power stations at its oil and gas operations and other sites by 2027, it said on Friday. Sinopec did not disclose the size of the planned solar power stations, which it also intends to build at its mines, petrochemical sites and gas stations.

Does Sinopec have a floating solar array at Qingdao refinery?

Image (cropped): Sinopec has expanded a floating solar array at its Qingdao Refinery, aiming to cut the cost of green hydrogen with on-site renewable energy and seawater (courtesy of Sinopec via prnewsire.com).

What's next for Sinopec?

The next step for Sinopec is a 23-megawatt floating array in support of its green hydrogen system at the Qingdao refinery, so stay tuned for more on that. Meanwhile, here in the US, woe is us. The US Department of Energy began promoting the floating PV solution in force back in 2018.

What does Sinopec do?

Sinopec Brings China's First Floating Offshore Photovoltaic Project into Operation. Support CleanTechnica's work through a Substack subscription or on Stripe. Whelp, that was fast.

The company last year said that it generated 1.32 billion kilowatt hours (KWh) of electricity from its solar power plants, up 200% from the previous year, with its combined solar and wind ...

Solis had carried out an in-depth survey with Sinopec in July 2020 to transform the high power 255kW inverter into an integral part of the project. The project is seen as a breakthrough for ...

Using LONGi modules and the Solis-110K-5G PV inverter, the annual power generation is expected to reach 91,000 kilowatt hours. More than 10,000 kilowatt hours of surplus power will be ...

Last December China's state-owned oil company, Sinopec, recapped the results of a modestly scaled floating solar pilot project, aimed at producing green hydrogen from seawater.

The project is seen as a breakthrough for Sinopec in the application of distributed solar power generation and also the first carbon-neutral gas station built and run by Sinopec in Guangxi. ...

On February 14, 2023, the evaluation results of the centralized photovoltaic inverter for the 106MW photovoltaic power station construction project in Gudong Management District 1 of Shengli Oilfield ...

By integrating photovoltaic technology with other renewable energy sources and venturing into green hydrogen production using solar-generated electricity, Sinopec is carving a path towards a more ...

Recently, the bid evaluation results for PV inverters in 2025 were announced. The project is divided into three power segments, including: Centralized PV power generation medium- ...
