-----

I was even planning to over panel for when rain starts again but with the way the controller is currently very hot, now that there is full sunlight, I am afraid to do it.

My solar controller in the bedroom of my 2024 225mls was getting extremely hot and now has a black spot on the screen. I took it loose and found that whoever attached the wires to it was ...

Have you noticed that the cables connected to your photovoltaic (PV) solar panels are feeling unusually warm to the touch? While it may seem concerning at first, there are several reasons ...

Victron charge controllers are fan-less and are designed to dissipate heat through their the shell of the body. The outer back part is a heat sync. This is normal especially at full load.

This article will give you the lowdown on why inverters overheat, how to spot trouble before it gets serious, and what steps you can take to cool things down and keep your solar system safe ...

I rigged up a system in my trailer and ran it successfully for 40 days exactly and one day the Renogy 40a mppt started smelling hot and the negative incoming solar wire got so hot it melted ...

While camping during a sunny day in Anza Borrego, I noticed that my Solar Charge Controller was very hot to the touch. Hot enough that I could keep my finger on it for only a second. A ...

Solar controllers do get warm, but what you are describing is too hot. Unless the controller is mounted in a hot area with no ventilation, it is likely the controller is defective. I would replace it. ...
