Although China currently has the world's largest installed capacity of hydro, solar and wind power, its energy needs are so large that renewable sources provided only 29.4% of its electricity generation in ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

In 2024, China's government held an estimated 290 million barrels in the strategic petroleum reserve, according to Vortexa. In mid-2024, Chinese government directed its national oil companies to add 59 ...

China has achieved stunning growth in its installed renewable capacity over the last two decades, far outpacing the rest of the world. But to end its continued dependence on fossil fuels, it ...

With wind and solar generation growing exponentially and challenging fossil generation, and with the wider economy electrifying fast, China's energy-related fossil fuel demand is likely soon to begin falling.

This article explores how renewable energy sources are impacting crude oil consumption in China, examining the implications for electricity generation and oil demand.

In the West, renewables such as wind and solar have largely pushed out coal-fired power generation, and the intermittency that they bring to grids has been addressed by using natural gas, ...

On desert land renowned for its boundless oil reserves, Chinese companies are building one of the world's largest battery-storage projects alongside solar farms.
